Your Cole International USA border experience: fast, efficient, problem-free

Delays at the border can cost your business time and money. At Cole International, keeping your goods on the go is our top priority. That's why we created the SmartBorder shipper application, which allows brokers to work directly with their shippers when processing customs entries. It's as simple as uploading your shipment data from an Excel spreadsheet into the SmartBorder shipper application.

Shippers can create proforma invoices and shipping data that can be imported into the SmartBorder broker application via EDI. The Transactions Module allows you to check the status of shipments including release data and time, port of entry and invoice number. You can also preview and print invoices, CF701s and CF3461s.

Cole International keeps a constant watch on the US customs and logistics landscape to ensure our products and services keep pace with ever-evolving industry regulation. For example, we've harmonized the SmartBorder tool with CBP's eManifest tool to enable the electronic submission of all relevant shipping documents to CBP before your shipment reaches the border, so when it does, it's already cleared for a speedy, hassle-free crossing. Our SmartBorder software provides solutions to help you meet ACE eManifest requirements – an eManifest Portal and a Fax-to-eManifest Service.

With SmartBorder, you can rest assured your shipment will meet all the regulatory requirements for an efficient border crossing.

Service Features

- Uploads shipment data
- Creates pro forma invoices
- Ability to check status of shipments
- ACE eManifest Portal

Benefits

- Allows shippers and brokers to work together directly
- Ability to submit all shipping data prior to arrival of shipment at border
- Faster processing time at border
- Helps you meet CBP's ACE eManifest requirements
